Forefronts in Substance Abuse During Pregnancy, Postpartum, and Pediatrics (FrSAP3) is an annual research education program intended for medical and graduate students, postdoctoral fellows, clinical professionals, and social workers.

This NIH/NIDA-sponsored program provides conceptual education, expert-guided discussions, and research training in the methods necessary for studying pregnant people with or at risk for Substance Abuse Disorders (SAD) and their neonates, toddlers, and children, as well as the mechanisms of and therapeutic strategies to alleviate the suffering from SAD.

The course has formal and individual career components, ensuring that each participant is well-versed in skills for designing, conducting, and publishing independent research, obtaining grants, and launching independent careers.

Application Deadline
January 31, 2024
